Disclaimer: This document is part of an implant and surgical procedure used in conjunction with Nobel Biocare implants. It is not intended to be used in conjunction with implants made by third parties. Products made by third parties in conjunction with Nobel Biocare implants will void any warranty or other obligation, express or implied, of Nobel Biocare. The user of Nobel Biocare implants has the duty to determine whether or not any product is suitable for the particular patient and clinical situation. If in doubt, please contact your Nobel Biocare distributor or your dentist for any direct, indirect, punitive or other damages, arising out of or in connection with any errors in professional judgment or practice in the use and surgical application of Nobel Biocare implants. The clinician is also obliged to study the latest developments in regard to the Nobel Biocare implants. The clinician has to contact Nobel Biocare. The processing and surgical application of this product are under the control of the clinician, they are his/her responsibility. We assume no liability whatsoever for damage arising thereof.

Description: Endosteal threaded dental implant made from biocompatible commercially pure grade 4 titanium or TiUnite® surface.

Indications: Oral implants are to be integrated in the jaw bone (osseointegration) and used for anchoring or supporting tooth replacements in either jaw. Restorations range from a single tooth to a fixed/removable full dental arch or overdenture applications to restore chewing function.

Contraindications: It is contraindicated placing dental implants in patients:

- mainly unfit for an oral surgical procedure

- with inadequate bone volume unless an augmentation procedure can be considered

- in whom adequate size, numbers or desirable position of implants are not achievable to achieve safe surgery

Instruction for clinicians: Special training is required for dental implants. Most information users, always go through special training before undertaking a new treatment method. Nobel Biocare offers a wide range of courses for various levels of knowledge and experience. For more info please visit www.nobelbiocare.com. Working the first time with a colleague, experienced with the new device/treatment method, avoids eventual complications. Nobel Biocare has a global network of mentors available for this purpose.

General precautions/Warnings: One hundred percent implant success can never be guaranteed. With respect to pedodontics, routine treatment is not recommended until the end of the jaw bone growth has been thoroughly documented.

Pre-operative hard tissue or soft tissue deficits may yield a compromised esthetic result or unfavorable implant angulation.

It is strongly recommended that NobelActive™ implants are used only with Nobel Biocare surgical instruments, as combining components that are not dimensioned for correct mating can lead to mechanical instrumental failure, damage to tissue or unsatisfactory esthetic results.

Precautions/Warnings: Pre-surgery: A careful clinical and radiological examination of the patient has to be performed prior to surgery to determine the psychological and physical status of the patient. Special attention has to be given to patients who have localized or systemic factors that could interfere with the healing process of either bone or soft tissue or the osseointegration process (e.g., cigarette smoking, uncontrolled diabetes, oro-facial radiotherapy, steroid therapy, infections in the neighbourhood). In general, implant placement and prosthetic design must accommodate the patient's condition. In case of buccal or unfavorable jaw relationships reparation of the treatment option may be considered.

Precautions/Warnings: At surgery: Careful clinical and radiological examination of the patient.

Special attention has to be given to patients who have localized or systemic factors that could interfere with the healing process of either bone or soft tissue or the osseointegration process (e.g., cigarette smoking, uncontrolled diabetes, oro-facial radiotherapy, steroid therapy, infections in the neighbourhood).
