Clinical Case
NobelActive® 3.0

January, 2012
**NobelActive® 3.0**

Dr. Iñaki Gamborena  
Spain

**Narrow space restoration**  
Female patient  
22 years old

**Implant:**  
NobelActive 3.0 3.0x13mm

**Flap with augmentation**

**FDI POS:**  
Teeth 31, 41

**Dental Lab:**  
Iñigo Casares
"The narrow profile of NobelActive 3.0 maintains the high initial stability and strength associated with the original NobelActive, making it an implant I trust for treating narrow space cases."

Dr. Iñaki Gamborena

Initial clinical situation:

Extraction of both lower central incisors needed due to extensive root infection and fractured teeth. Highly limited space conditions.
Pre-operative x-ray showing failed endodontic treatment.

Placement of two NobelActive 3.0 x 13mm implants with immediate function protocol, including a connective tissue graft to increase soft tissue volume. A surgical guide was used to ensure optimal implant direction and depth.

NobelActive 3.0 implants in place.
