Guided Pilot Drill

The osteotomy is created using either the OsseoDirector or Guided Pilot Drill, and OsseoShapers. OsseoShapers are threaded devices that are inserted and removed at low speed without irrigation. They replace the usual drills used for the creation of the osteotomy.

1. The Guided Pilot Drill can be used as alternative or before using the OsseoDirector.

2. Seat the surgical template.

3. Engage the Guided Pilot Drill with the handpiece and drill the full planned depth.
   The Guided Pilot Drill must proceed at high speed, maximum 2000 rpm and under constant and profuse irrigation by sterile saline at room temperature.

4. Remove the surgical template and proceed with the OsseoDirector to widen the osteotomy or directly to the OsseoShaper 1.

Caution The OsseoDirector, Guided Pilot Drill and Twist Step Drill extend up to 1 mm longer than the implant length when seated. Allow for this additional length when drilling near vital anatomical structures.

Warning The OsseoDirector, Guided Pilot Drill, OsseoShapers and Twist Step Drills are sharp instruments. Handle with care to prevent injury.

Order online
Order our complete range of implants and prefabricated prosthetics 24 hours a day through the Nobel Biocare online store.
