

Product summary

Nobel Biocare N1™ system

Direct

OsseoDirector™ instrument

First instrument in the Nobel Biocare N1™ system site-preparation protocol that sets the depth and direction of the Nobel Biocare N1™ Implant.

The sharp design of the OsseoDirector™ tip supports bone engagement and the tapered body allows changes in direction while cutting the pilot osteotomy.

Ø <2000 rpm

Shape

OsseoShaper™ instrument

Preserves vital bone with low speed and no irrigation.

Shapes specific osteotomy for co-packed implant.

Controlled insertion at low speed follows OsseoDirector™.

Torques generated using the OsseoShaper™ instrument guide the surgical workflow, assist in bone evaluation and provide an early prediction of implant stability.

Ø 50 rpm / < 40 Ncm

Control and CONFIDENCE

Biologically driven system

Nobel Biocare N1™
in 100 seconds

Nobel Biocare N1™ Base

The trioval design with Xeal™ surface embracing the Mucointegration™ principle.

Emergence profile designed for long-term tissue stability, esthetics and restorative flexibility.

20 Ncm

Place

Nobel Biocare N1™ Implant

Engineered for stability and early tissue integration, the Nobel Biocare N1™ Implant is optimized for immediate placement and function.

Ø 25 rpm / < 70 Ncm

Nobel Biocare N1™ trioval conical connection (TCC)

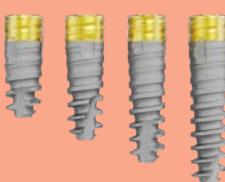

Trivoval implant neck reduces stress on cortical bone and promotes fast osseointegration

NP 3.5

— 9 11 13 15

TiUltra™ surface

TiUltra™ surface is the latest anodized implant surface, optimized for tissue integration at every level. Its ultrahydrophilic implant surface features an anodized titanium gradient from minimally rough coronally to moderately rough apically.

RP 4.0

7 9 11 13 15

RP 4.8

7 9 11

Round, slightly tapered apex

matches co-packed OsseoShaper™ 1

Designed for engagement in extraction sockets

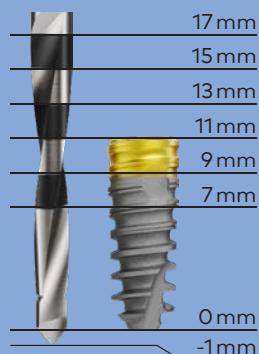

Nobel Biocare N1™ Surgical protocol

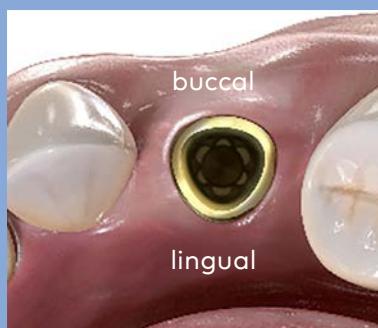

Implant driver orientation

The Nobel Biocare N1™ site preparation is biologically driven, designed to preserve vital bone and thereby promote fast osseointegration. The OsseoShaper™ torque defines the next step in the workflow, guiding clinician and assistant through the entire protocol.

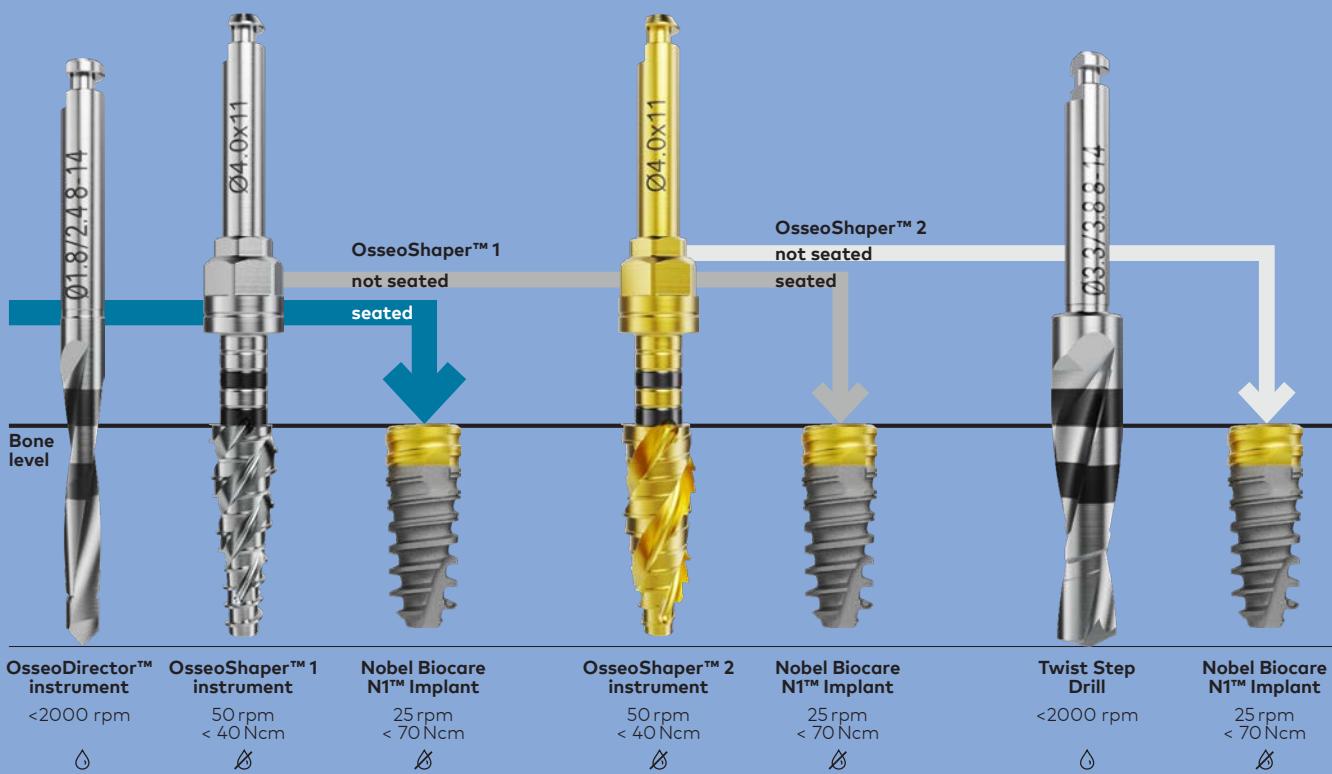

Length markings

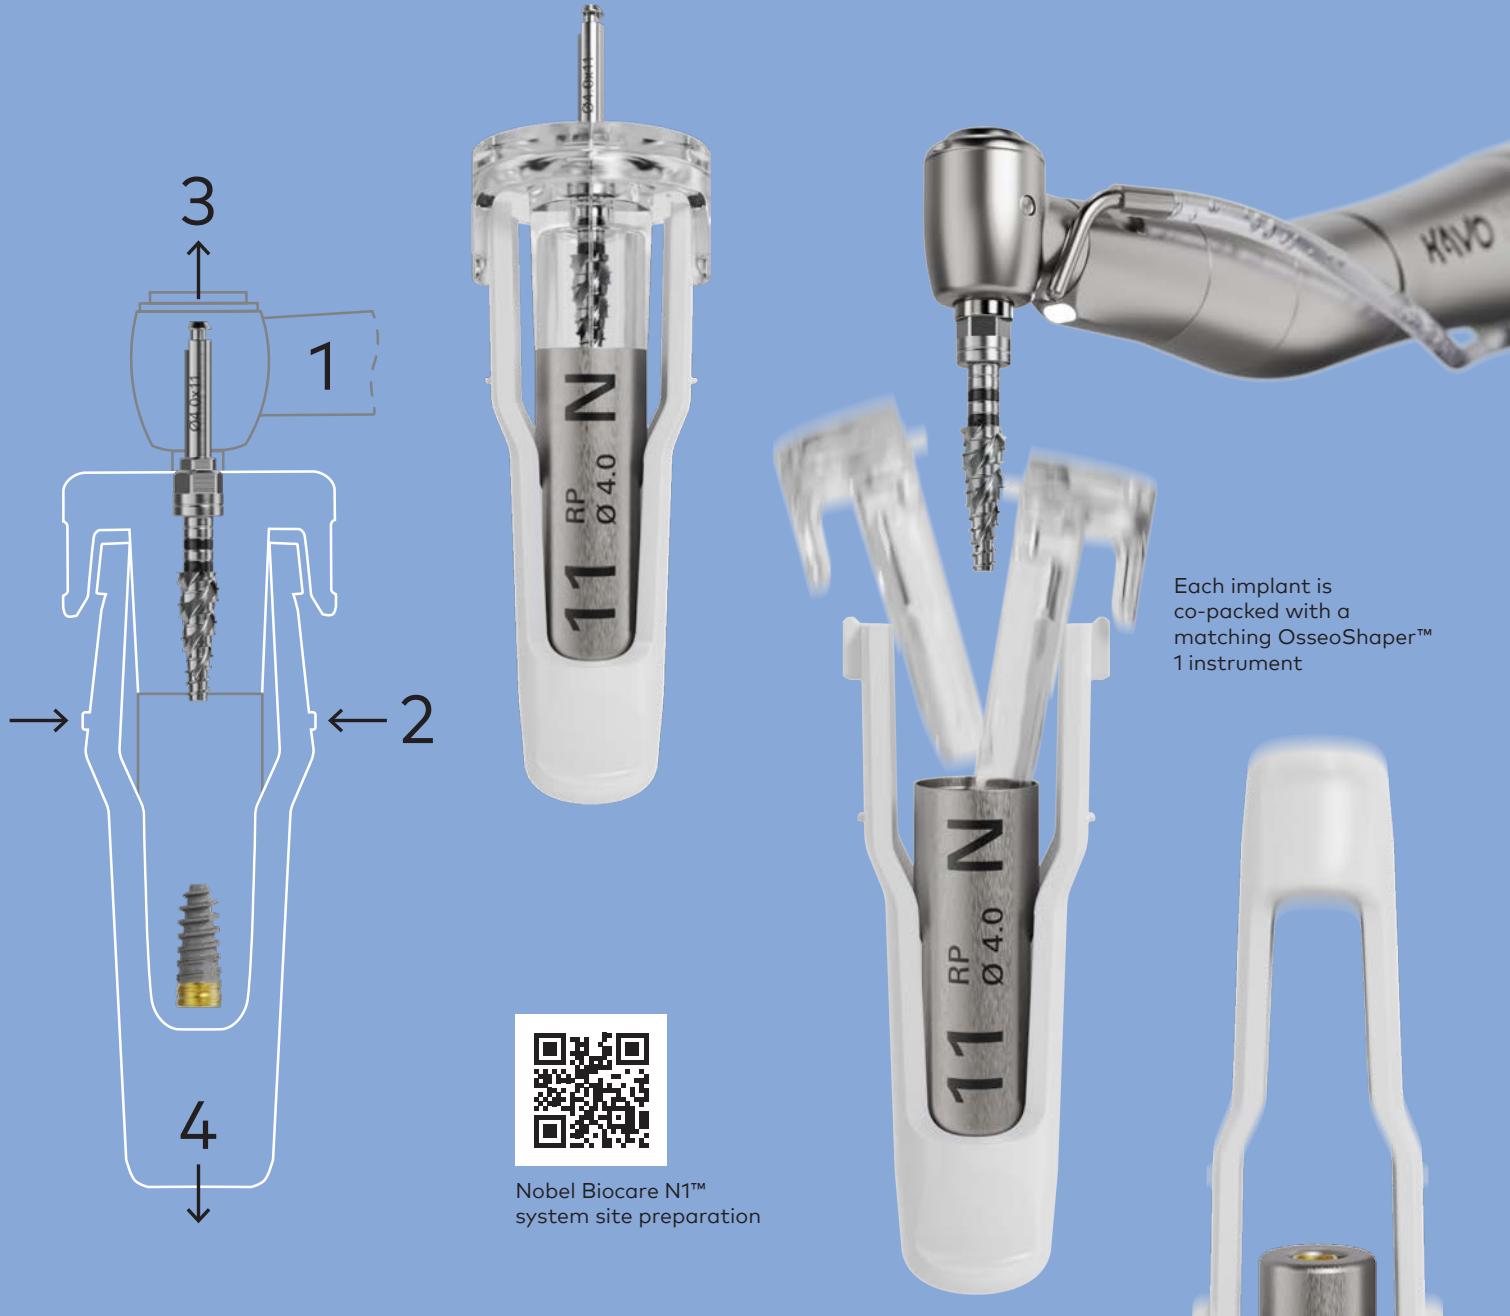

Implant orientation

OsseoShaper™ depth markers

PureSet™ Tray

The Nobel Biocare N1™ PureSet™ Tray is designed for automated cleaning with few manual steps. It's organized to save time, with an intuitive layout and easily identifiable components designed to reflect the surgical workflow. Tray and instruments stay together, secured by metal springs, throughout the cleaning and sterilization process for a significant time savings and to support dedication to uncompromised hygiene.

Base level

Healing Abutment

One-piece Healing Abutment for Nobel Biocare N1™ Base comes in a tall, anatomic flared and short design.

Two-piece IOS Healing Abutment designed for easy intraoral scanning without removal.

Universal Abutment

Screw-retained restorative solution for single units and short-span bridge milled crowns (in-house milling).

DTX Studio™ suite, 3Shape® and exocad™ compatibility.

Temporary Abutment

Modifiable to meet your functional and esthetic needs. For single units and short-span bridges.

Esthetic Abutment

Prefabricated cement-retained solution for single units.*

*Esthetic Abutments are approved in Canada for supporting implant bridges up to three units.

Nobel Biocare N1™ Base

Placed at the time of surgery and remains in place throughout the entire prosthetic procedure.

Trioval prosthetic interface resembling the teeth in the esthetic zone.

Available in three heights (1.75 mm, 2.5 mm and 3.5 mm) for flexibility in soft tissue management.

Impression taking

Open and closed tray Impression Copings for traditional impressions plus scannable Position Locators for intraoral and desktop scanning.

NobelProcera® restorations

on Nobel Biocare N1™ Base

Available for design in DTX Studio™ suite and 3Shape®

10 shades

Cement free

3 heights

Prosthetic screw

Clinical screw

Flexibility of ±25° with ASC

Implant level

Only 20 Ncm

Xeal™ surface

The pioneering Mucointegration™ surface for soft tissue integration.

It is a smooth, non-porous anodized surface featuring a protective layer which preserves the pristine surface chemistry and hydrophilicity for optimized soft tissue integration. Dense soft tissue contact with an abutment can act as a barrier that protects the underlying bone. This is a basis for long-term tissue health and stability.

Small screw channel

Harmonized emergence profiles

Xeal™ surface

Multi-unit Abutment

Compatible with all Nobel Biocare Multi-unit Abutment components and instruments from healing caps to Multi-unit Screwdriver.

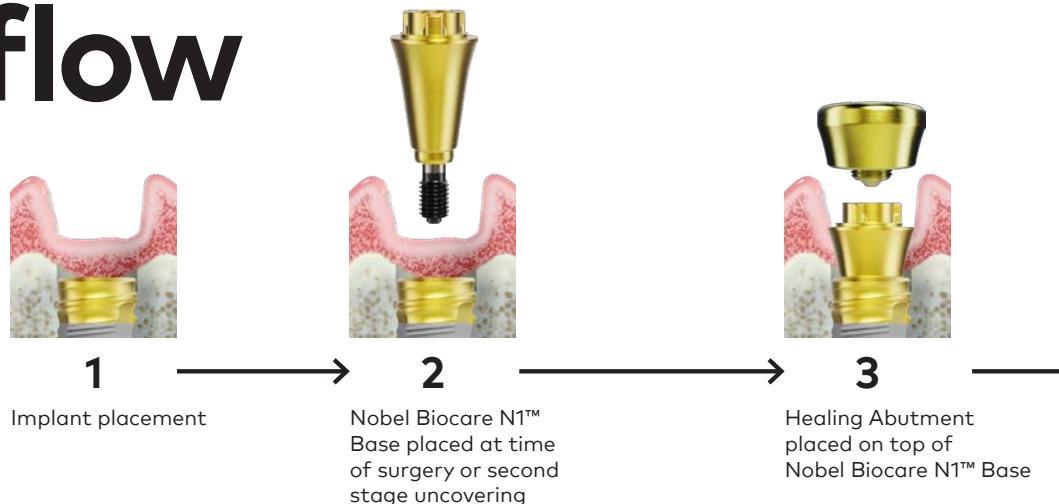

Black screws and laser markings help identify TCC Multi-unit Abutments.

Nobel Biocare N1™ restorative tooling

Omnigrip™ Mini Screwdriver

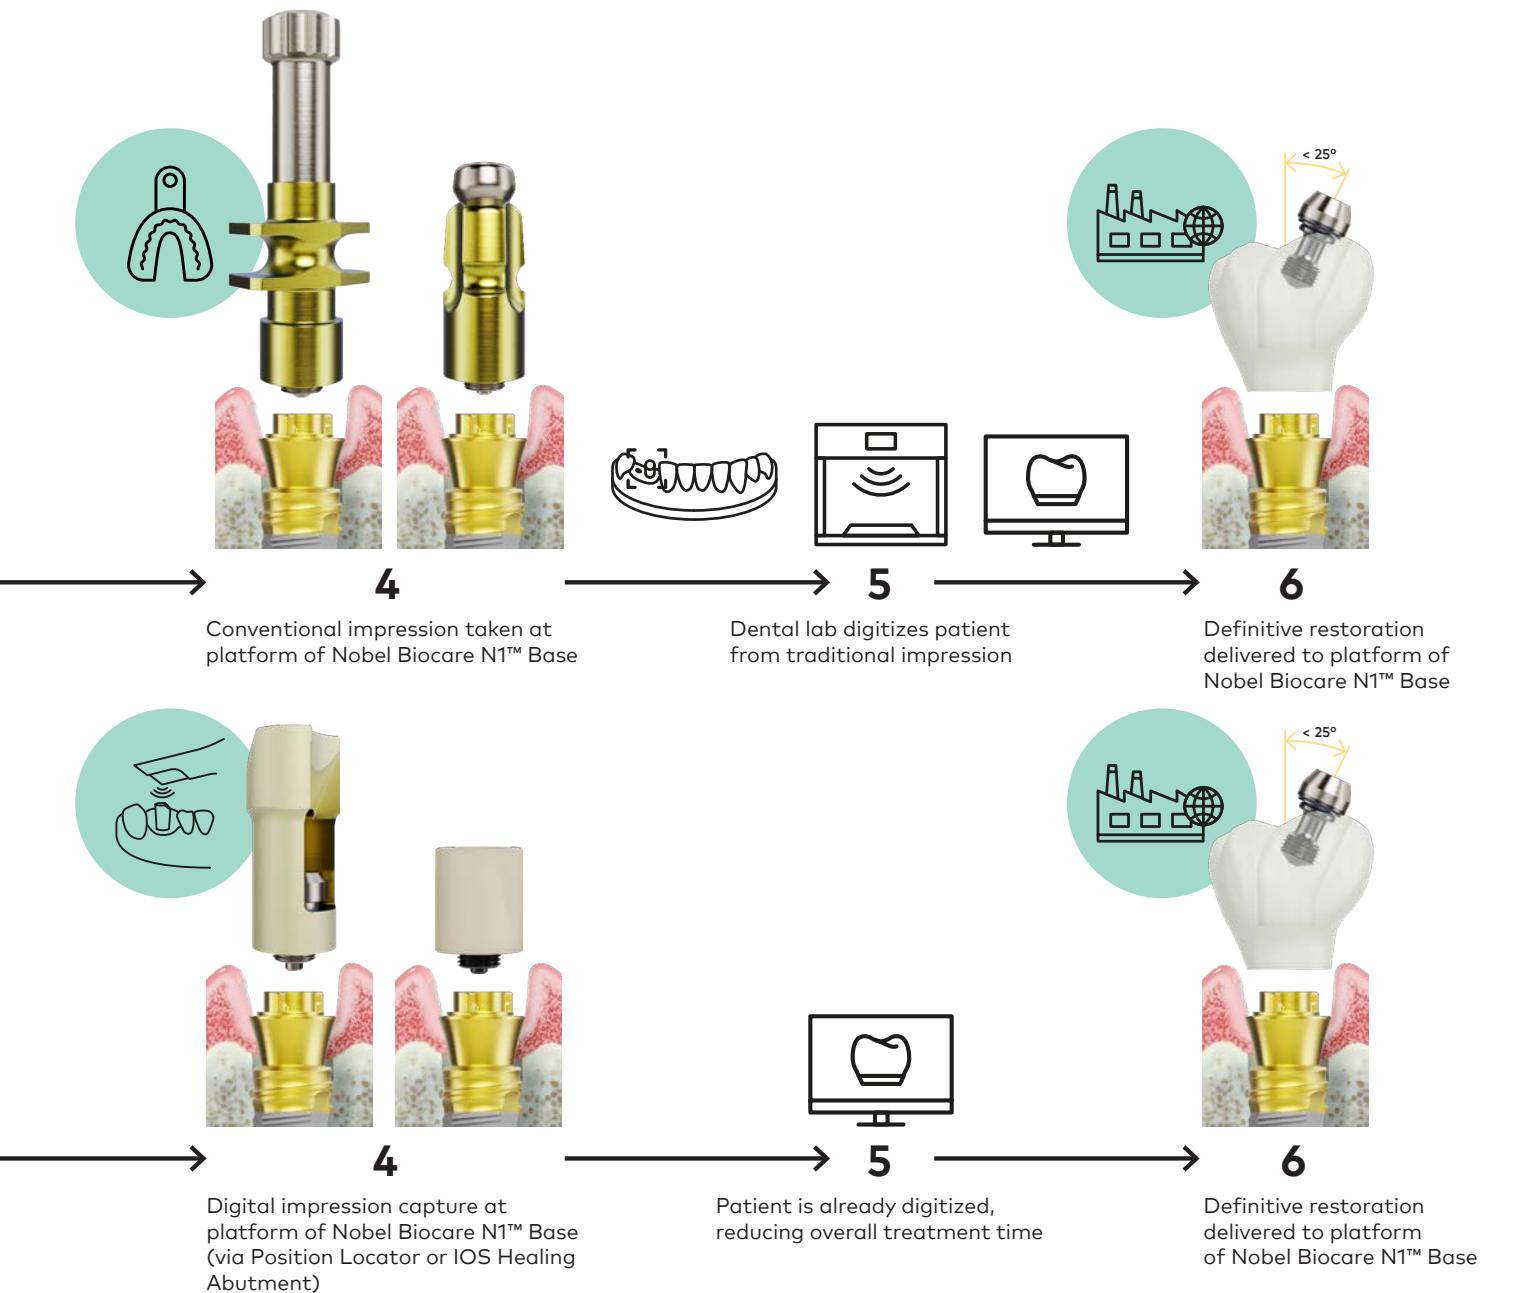

Screwdriver with pickup function.

Tightens at up to 25° angulation.

To be used with:

- Healing Abutments
- Temporary Abutments
- Universal Abutments
- Impression Copings
- Angulated Multi-unit Abutments

- Position Locators
- Titanium Blanks
- NobelProcera® Zr Implant Bridges
- Esthetic Abutments
- NobelProcera® Zr Crowns for N1™ Base

Screwdriver Multi-unit Abutment

To be used with:
Straight Multi-unit
