Long follow-up of a restored premolar in maxilla

Arturo Llobell
Spain
Case description
57-month follow-up NobelParallel™ CC Implant

Patient
80 years, female, healthy dentition

Clinical situation
Medium to soft bone at healed site 14

Surgical solution
Full flap, NobelParallel™ CC

Restorative solution
NobelProcera® Zirconia Abutment and Coping

Surgery date
July 2014

Total treatment time
4 years 9 months

Tooth position
14

Patient presented with a missing premolar and received NobelParallel™ CC implant upon raising a full flap, followed by the restoration with a NobelProcera® zirconia abutment and coping. Long-term follow-up demonstrates good bone and soft-tissue stability.
Healed site 14 with slight bone loss at position. Soft tissue recession on site 13 is not a concern for the patient.

Panoramic X-ray taken before the surgery.
**Initial clinical situation**

Surgical site with flap raised. Moderate bone quality is visible.

**Surgical procedure**

Placing the NobelParallel™ CC RP 4.3 x 11.5 implant. Insertion torque: 28 Ncm.

**Restorative procedure**

**Outcome**
